

Hygienic (Stainless Steel) Actuator

Hygienic Actuator

Hygienic actuators use in food, chemical, petrol, beverage, pharmacy, milk industry and stainless steel butterfly valves and stainless steel ball valves.

Hygienic actuators are produced in 3 type: normally close (NC), normally open (NO) and air/air activated.

The actuator is designed that an axial movement of a piston is transformed into a 90° rotation of a shaft. The torque of the actuator is increased when the valve disc contacts the seal ring of the butterfly valve.

Technical Features

Max. Air Pressure	7 Bar
Min. Air Pressure	4 Bar
Temperature	-20°C ... 80°C On request; -50°C ... 80°C
Opening Time	1,3 Sec
Closing Time	1,3 Sec
Air Connection	1/4" BSP
Weight	2,8 kg

Application

- Bracket is used for connect hygienic actuator to butterfly valve.
- Actuator type is selected according butterfly valve size and torque value.

Torque Value (6 bar)

Sizes

SIZE	A (mm)	B (mm)	ΔC (mm)
